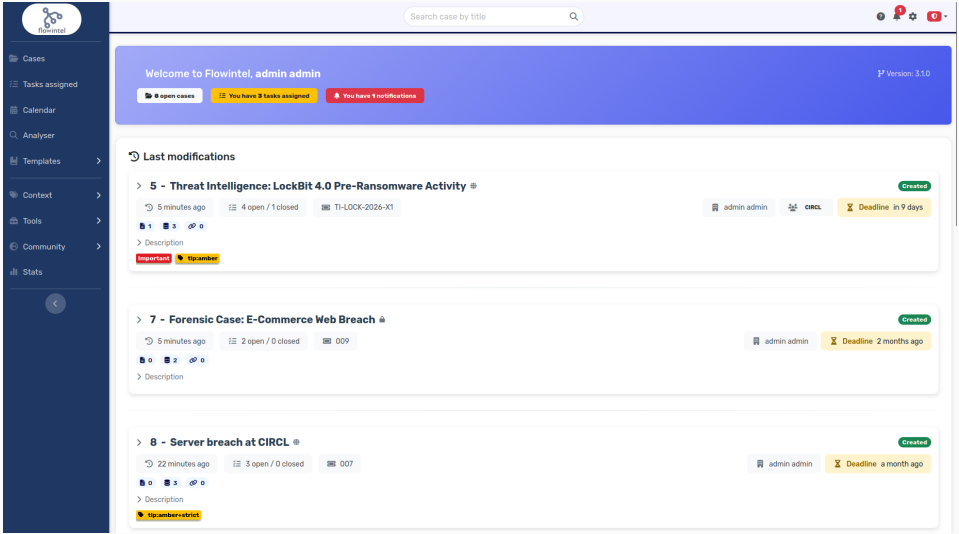
TLP:CLEAR

Flowintel, What & Why

FlowIntel is an open-source incident & forensic case management platform.

- Day-to-day CSIRT / SOC work still relies on spreadsheets, generic ticketing tools, or expensive closed platforms.
- There was **no vendor-neutral, open source** alternative focused on security operations workflows.
- FlowIntel fills that gap: structure investigations, keep evidence organised, and accelerate collaboration.

Overview - Homepage



TLP:CLEAR

1. Manage Structured Investigations

1. Manage Structured Investigations

- Create and manage cases with **full lifecycle tracking**
- Break cases into tasks and subtasks
- Assign **investigators with role-based access**
- Track progress, deadlines, and workload
- Keep notes organized
- Use case and task templates for standardized procedures

1. Manage Structured Investigations - case

Variables

Tactical Overview

Intelligence suggests an initial entry via a VPN vulnerability (CVE-2024-21887). The actor is currently in the 'Staging' phase, identifying high-value data targets for exfiltration prior to deploying the encryptor.

2. Handle Sensitive & Privileged Cases

2. Handle Sensitive & Privileged Cases

- Create privileged cases with restricted access
- Assign roles with specific permissions:
  - Case Admin can create cases
  - Queue Admin can accept tasks
  - Queuer can create tasks and await approval
- Prevent unauthorized deletion, merging, or closure
- Enforce organization-level visibility

2. Handle Sensitive & Privileged Cases

Permissions:

Note: Select one of the three role types below. Additional permissions apply to the Editor role only. An Admin already possesses all additional permissions, and a Read Only cannot have any additional permissions.

System role

- Admin
- Read Only
- Editor

Additional permissions (Editor only)

Organisation Management

- Org Admin

Privileged Cases

- Case Admin
- Queue Admin
- Queuer

Audit & Logging

- Audit Viewer

Editor Tools

- Template Editor
- MISP Editor
- Importer

2. Handle Sensitive & Privileged Cases

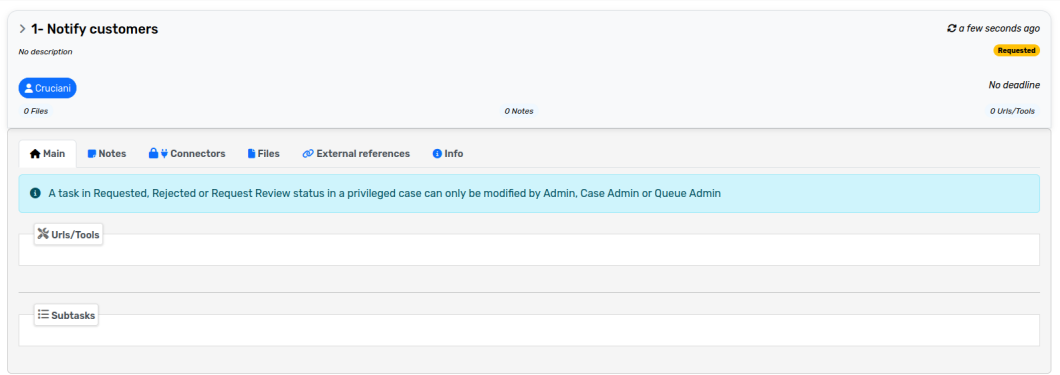
Task view:



3. Document and Preserve Evidence

3. Document and Preserve Evidence

- Attach files to cases and tasks
- Store forensic exports (CSV, JSON, TXT)
- Convert imported files into structured notes
- Record external references (OSINT, reports, URLs)
- Track file metadata (size, type, timestamp)

3. Document and Preserve Evidence

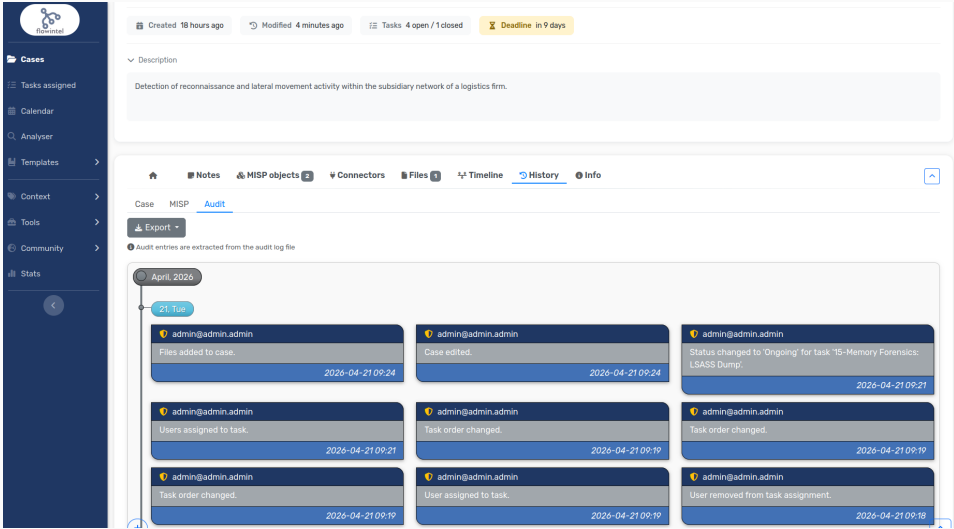
4. Maintain Full Audit & Accountability

4. Maintain Full Audit & Accountability

- Comprehensive audit trail of actions
- Log case creation, edits, deletions
- Track task state changes
- Record role and permission changes
- Dedicated Audit Viewer role

4. Maintain Full Audit & Accountability



TLP:CLEAR

5. Multi-Agency & Organizational Control

5. Multi-Agency & Organizational Control

- Organization-based visibility restrictions
- OrgAdmin role for delegated administration
- Prevent deletion of organizations owning cases
- Statistics per organization and user

5. Multi-Agency & Organizational Control

6. Integrate Threat Intelligence (MISP)

6. Integrate Threat Intelligence (MISP)

- Manage MISP objects inside cases
- Send case or just objects to MISP
- Create a case from a MISP event
- Synchronize cases with MISP events
- Use taxonomies and galaxies for classification
- Import custom taxonomies and galaxies
- MISP-modules integration for enrichment and analysis

6. Integrate Threat Intelligence (MISP)

Other features present in Flowintel

- Attribute value search functionality
- Importer for cases and templates
- Template repository support
- Bulk exporter
- Flowrefs inside notes
- API and Library[1]

Strategic Value for LEA

- Structured investigative workflow
- Strong governance and auditability
- Secure multi-agency collaboration
- Integrated intelligence handling
- Open-source and adaptable

The end

Thanks for your attention!
